**Exhibit 15: Fossils fuels subsidies amounted to a record \$1 trn in 2022, driven by energy security, largely owing to prioritization of energy reliability/affordability in response to the Russia-Ukraine war**

**Big rise in fossil fuel subsidies in 2022: In October 2022, the UNFCCC stated that the latest climate pledges could put the world on track for a 2.5°C scenario by the end of the century**

## Exhibit 35: We estimate that c.15% of global GHG emissions could be abated through technologies that rely on clean hydrogen

### Hydrogen: Arkema's solution for carbon-free mobility

Hydrogen fuel cells will have their role to play in post-oil mobility options, alongside all-electric vehicles. Arkema has anticipated this shift, developing materials and solutions that are already contributing to improving the industry's performance and business model.
